

Jeppesen Tailored Maps

Your Map. Your EFB.

With Jeppesen Tailored Maps, you can supplement FliteDeck Pro's data-driven enroute map with your own airline specific in-house content.

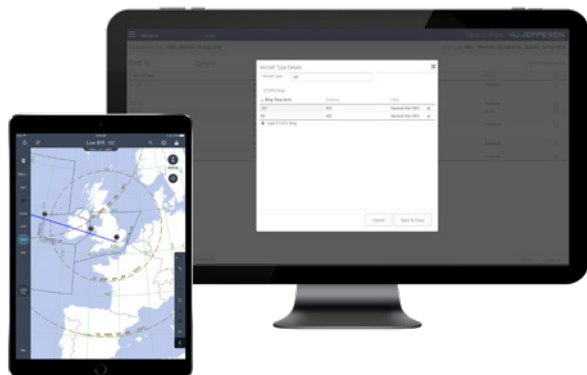

Control, customization and efficiency

- ✔ Improve flight deck crew workflows by having all enroute information specific to your operation in one place – right in FliteDeck Pro
- ✔ Reduce costs of printing and distributing company enroute charts through digitalization
- ✔ Increase operational flexibility by creating, publishing and distributing enroute content on-demand and independent of established cycles
- ✔ Decrease the risk of operational disruptions due to physically distributed company-own paper enroute charts not reaching their destination on time

Key features of Jeppesen Tailored Maps

- ✔ Create, replace, update or delete enroute content for depiction on FliteDeck Pro, including:
 - ETOPs range rings based parameters such as location, time, distance or aircraft type
 - Company airports with details on fleet use, airport capabilities, communication frequencies and local contacts
 - Location-based communications
- ✔ Export C070 reports specifying regular, refueling, provisional and alternate airports
- ✔ Preview, publish and distribute enroute content on-cycle, on-demand or real-time
- ✔ View history details and content at a glance

Only Jeppesen gives your ground operations this much control.

Learn more about what we offer.

Tailored Maps is just one of several modules in Jeppesen Ground Controls, a web-based application enabling ground operations to manage, supplement, preview, publish and synchronize data, navigational charts and maps with a single tool.

Find out how Ground Controls can benefit your operations by contacting your account representative or visiting jeppesen.com/GroundControls.
