Fatigue Risk Management Training Course

Efficiently build crew alertness into your operation.

Background

Fatigue Risk Management (FRM) is a flexible and data driven approach for managing fatigue-related risk in an airline. With changing regulatory rules, FRM will soon become mandatory for most operators throughout the world.

With a sound FRM approach, costs and complexity can be kept to a minimum. Benefits can be substantial, not only from a higher level of safety, but also from the potential in increased crew productivity.

The training course offered by Jeppesen covers fatigue science, fatigue risk management systems, fatigue modeling, as well as hands-on exercises constructing and evaluating crew schedules using the Boeing Alertness Model (BAM).

The course is open to all airlines and is aimed at managers within flight operations and crew planning, safety pilots, crew schedulers and staff involved in the crew scheduling process.

The course will utilize tools for quantitative analysis of fatigue and productivity, focused on the crew planning aspects aimed at helping you to understand what FRM will mean for your airline and how to best apply it.

Course Contents

- Fatigue science
- Fatigue risk management systems
- Update on regulatory changes and requirements
- Fatigue modeling
- Risk modeling
- Hands-on exercises constructing and evaluating crew schedules using BAM and optimization techniques

More Information

Courses are scheduled regularly at Jeppesen offices in Göteborg (Sweden) and Montreal (Canada). Specific course dates are available on the Jeppesen Crew Academy web page at www.jeppesen.com/crewacademy.

To enroll in the course or for general questions, including information on local hotels and logistics, e-mail training.carmen@jeppesen.com or phone +46 31 720 81 00. Jeppesen are happy to assist you with local hotel bookings or any other questions you might have.
