

Challenge

Aircraft operators need quick and easy access to computerized flight planning.

Solution

JetPlan.com. Internet-based access to Jeppesen's industry-leading JetPlan® flight planning engine, including weather graphics, text weather, and NOTAMs.

Anywhere, anytime - and at low cost

With JetPlan.com, Jeppesen has made it possible to connect to JetPlan, from anywhere at any time, and create flight plans

without special or dedicated software or hardware. All you need is a PC, Internet access and Internet Explorer® version 5.0 or higher. Internet access makes connecting to JetPlan.com fast and cost effective. Some features of JetPlan.com are also available through a variety of PDA devices.

For users who prefer it, secure access using 128-bit SSL technology is also available.

Flexibility and functionality

JetPlan.com's easy-to-use interface and feature-rich architecture are ideal for the corporate user who needs quick and easy access to Jeppesen's flight planning capabilities. Using JetPlan.com, users can:

- Retrieve NOTAMs and weather information
- Retrieve, view and print graphical weather maps
- View planned routes against ETOPS and other constraints
- Run flight plans
- File flight plans with ATC
- Transmit flight plans, weather and NOTAMs via SITA, ARINC, AFTN, FAX, e-mail and some ACARS providers
- Manage all customer databases online.
- Retrieve Enroute Charges reports

Easy-to-use

JetPlan.com's flight planning Applet ensures the request process is fast and easy with the user being guided along a logical path to obtain a flight plan. Advanced features are available through tabs grouped for context and the applet will enable the user to validate their inputs prior to submission to the JetPlan engine. Power users can choose to utilize the 'HTML' GUI for keyword requests. Users must have the Sun JVM on their PC to use the flight planning applet.

JetPlan.com's dispatch center lets the user on the go keep track of their flight planning activity, as well as monitoring Roger / Reject messages from ATC and numerous other tasks.

Weather and NOTAMs

Users can download the full range of Jeppesen's graphical weather maps including winds aloft, significant weather, icing and turbulence areas, satellite maps, hurricane and tropical storms. Additionally a large range of textual weather data from TAFs to PIREPs, winds aloft, area forecasts and of course NOTAMs can be retrieved and displayed.

Textual 'Route Briefs' can be requested with a flight plan. These briefs are associated with the route of flight and can be automatically tailored to be applicable to the aircraft type and company policies, including filtered NOTAMs.

Flyable the first time

Using Jeppesen's dynamic RAD compliance, and a direct link with Eurocontrol's route validation website, make your flight plans in Europe "Flyable The First Time."

The right solution for users on the go

Designed for the user needing flight planning anywhere, any time, at low cost, JetPlan.com is the perfect complement to Jeppesen's other JetPlan-based flight planning solutions.
