

JEPPESEN DISPATCH CONTROL

THE DEFINITIVE PLANNING AND DISPATCH SOLUTION

Today's dispatch managers have uncompromising demands. You must manage safe and effective operations – but you must also optimize resources and processes, finding new ways to increase efficiencies and reduce costs. Obviously, you require powerful tools. Jeppesen delivers with the definitive solution that reinvents flight planning and dispatch. Designed with extensive input from industry partners, Jeppesen Dispatch Control is the new way to increase productivity by managing and simplifying complexity and reducing costs and fuel consumption.

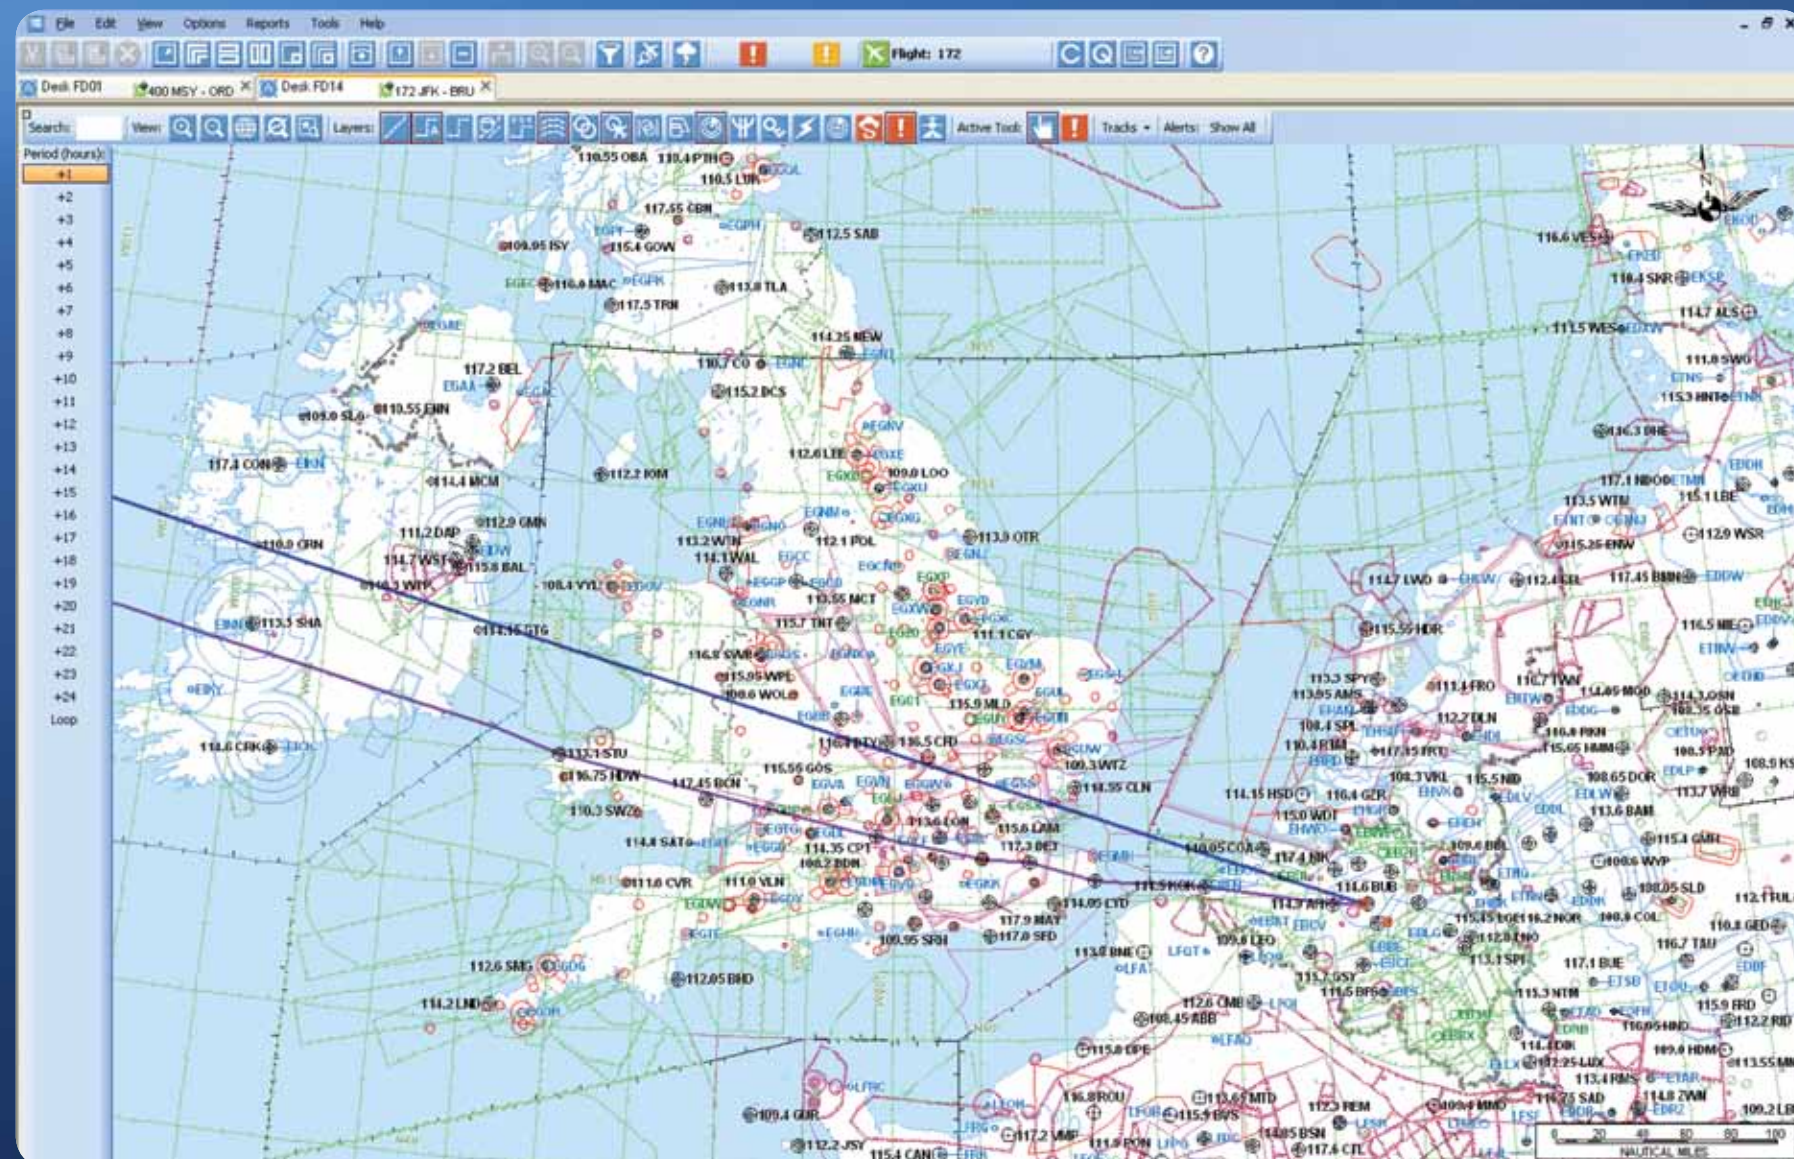

- Automated schedule distribution
- Peer-to-peer transfer and borrowing
- Online shift turnover process
- Different views by desk, by flight and by aircraft

MANAGE WORKFLOW AND WORKLOAD MORE EFFECTIVELY

Dispatch Control delivers the ultimate user experience by always focusing attention to the right place, at the right time. Users can easily track changes, updates and what-if scenarios, and quickly manage flight plan filing and flight releases. All with a minimum number of clicks. This allows for maximum data ownership and traceability – users know what they have done and what they are working on at all times. This is especially important during shift changes or temporary hand-offs.

INCREASE SITUATIONAL AWARENESS

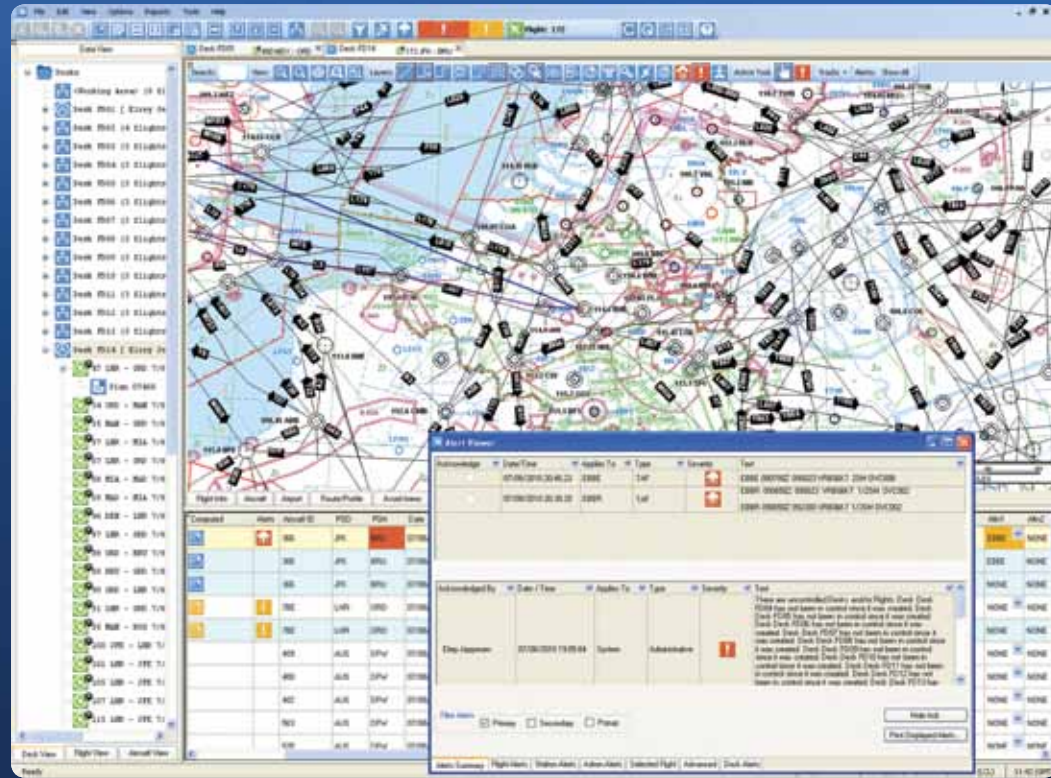

With Dispatch Control, there are no distractions – users see what they need to see, when they need to see it. Users stay informed and focused through powerful capabilities that enhance situational awareness. These include integrated Jeppesen terminal and enroute charts that display everything from route-of-flight and alternates to pertinent ETOPS information. Future updates will allow displays of current aircraft position, weather and planned route of flight – all in a single view.

ENHANCE SAFETY THROUGH MANAGEMENT BY EXCEPTION

When issues arise, it is imperative that dispatchers are able to focus on the problem at hand, and be able to quickly identify where attention is best spent. Dispatch Control delivers robust, flexible alerting tools that allow you to define a large number of alerts and exceptions, closely monitor and flag issues, such as exceeding company minimums, and then bring these issues to the attention of dispatchers.

- When exception occurs, relevant fields are automatically highlighted
- Multiple alerting levels, all fully configurable
- Routine tasks can be consolidated or automated

CONFIGURE YOUR SOLUTION ACCORDING TO YOUR NEEDS

Because your specific needs are paramount, Jeppesen Dispatch Control offers you advanced configurability that delivers the benefits of both turnkey ease-of-use and robust customization. Three levels of configurability:

- **USER** – Detach and move panes, add or remove fields, change the order of information, customize with robust filtering options and more.

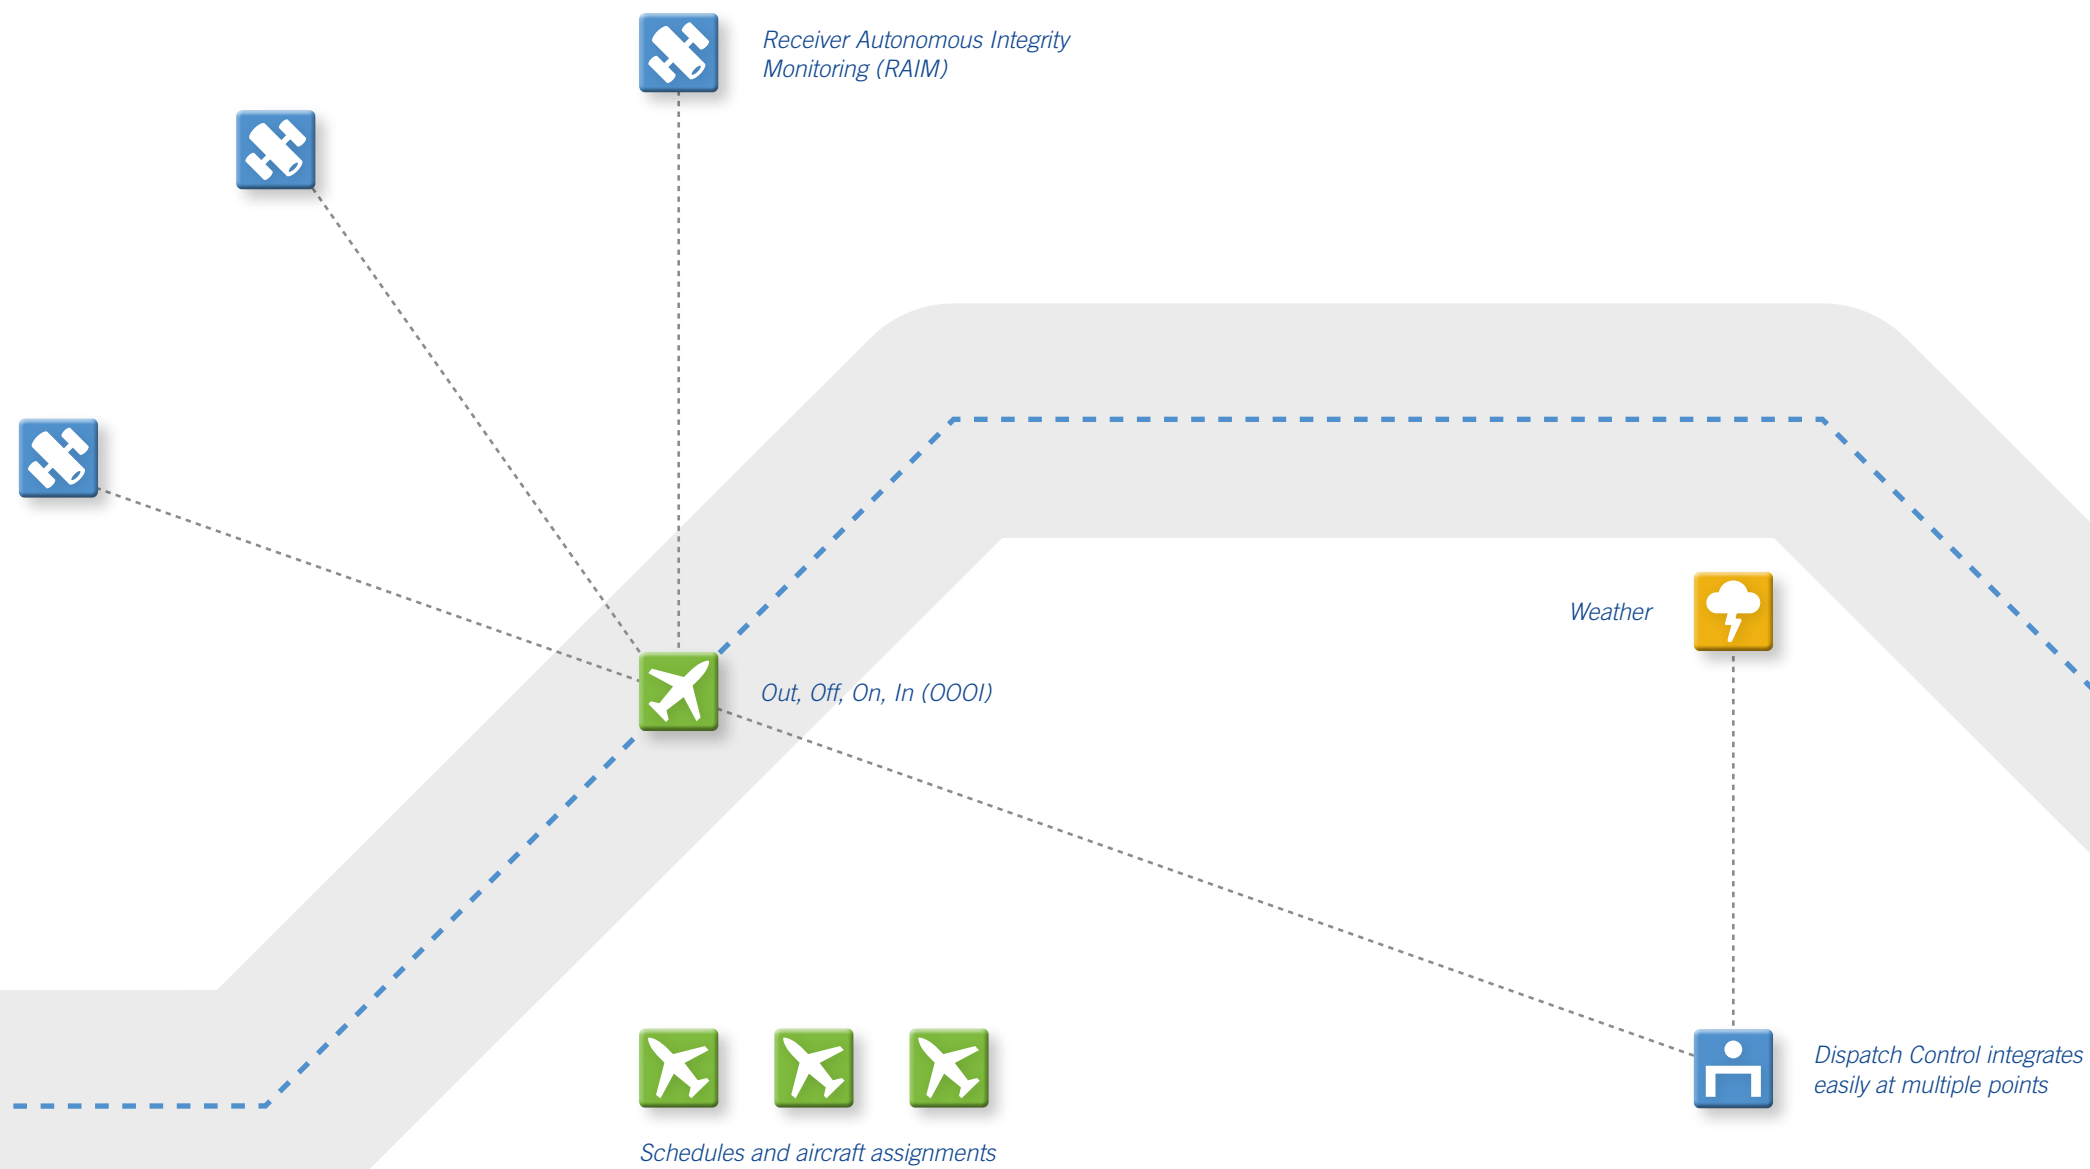

- **OPERATIONAL** – Operators can define thresholds, alert and severity levels, and permissions.

- **ADMINISTRATIVE** – Set default order in which flights are displayed, define levels of access and configure to meet workflow and policy needs.

INTEGRATE WITH EXISTING AND FUTURE SYSTEMS

With Jeppesen solutions, the right decision today is also the right decision tomorrow. Dispatch Control is designed to accommodate future applications and upgrades, and can easily integrate with other legacy systems, allowing for a natural, seamless flow of information across your operation. Incorporate RAIM and Weather. Integrate OOOI, schedules and aircraft assignments. Dispatch Control interacts effectively with various integration points.

REDUCE COSTS THROUGH ENHANCED OPTIMIZATION

The more powerful your optimization, the greater your cost savings and efficiencies. And not simply fuel savings, but also significant cost savings, especially when it comes to lateness costs and other operational variables that can impact your budget. As part of Dispatch Control, we are making a large number of enhancements to our already industry-leading flight plan optimizer. This will ensure that you benefit from the best user experience and stay at the leading edge of advanced optimization.

THE CONFIDENCE OF JEPPESEN SUPPORT, DATA AND SERVICES

Jeppesen Dispatch Control gives you access to Jeppesen's experience and wide range of data and services, including obstacle database information, take-off and landing performance calculations, NavData, and other services such as weather and NOTAM feeds – all actively supported round-the-clock, every day, by Jeppesen.

If you seek a powerful solution to optimize your operations, manage complexity, enhance safety and ultimately reduce costs, contact us today about Jeppesen Dispatch Control.
