

**FLEXIBLE USE OF AIRSPACE CONDITIONAL ROUTES - EUROPE**
**GENERAL**

Conditional Routes (CDRs) complement the permanent ATS route network. The purpose of CDRs is to allow flights to be planned on and to use ATS routes, or portions thereof, that are not always available. CDRs are established through potential areas of temporary segregation identified under the generic term "Temporary Segregated Areas" (TSAs). The conditions for the use of CDRs will be daily published

in national „Airspace Use Plans“ (AUPs) and the „European Airspace Use Plan“ (EAUP) by EUROCONTROL - CFMU.

CDRs are divided into three different categories according to their foreseen availability, their flight planning potential and the anticipated level of activity of the associated Temporary Segregated Area or Areas.

CDR can be established in one of the three following categories:	
CDR 1	<ul style="list-style-type: none"> <li>- Permanently plannable</li> <li>- Available for most of the time</li> <li>- Flights will be planned in the same way as planned for all permanent ATS routes</li> <li>- Any re-routing around associated TSAs will be made on ATC instructions only</li> </ul>
CDR 2	<ul style="list-style-type: none"> <li>- CDRs are part of pre-defined routing scenarios which respond to specific capacity imbalances</li> <li>- Flights will be planned only in accordance with conditions daily published in the AUP/EAUP</li> <li>- Possible re-routing on ATC instructions only</li> </ul>
CDR 3	<ul style="list-style-type: none"> <li>- Not plannable</li> <li>- Usable on ATC instructions as short notice only</li> </ul>

Refer to the Jeppesen European Air Traffic Flow and Capacity Management (EATFCM) User Guide for details on the European Flexible Use of Airspace (FUA) concept and on Flight Planning on CDRs.

**Unless otherwise stated all times are UTC. Times quoted are winter times, summer times are in brackets.**
