

# Jeppesen Tailored and Standard Charts

Customized charts for your operations.

Jeppesen tailored and standard charts provide airlines with high-quality, standardized aeronautical charts, procedures and information to efficiently plan and fly a flight anywhere in the world. Whether paper or electronic, Jeppesen charts can be customized for your airline's specific operations and procedures.

Jeppesen gathered input from professional flight crews to create the innovative Briefing Strip™ format, which organizes information by phase of flight and includes descent calculations.

Jeppesen tailored and standard charts are the complete solution for consistent chart design, proven quality-control processes, and multiple delivery and coverage options.

In order to reduce time, maximize efficiency and maintain or improve safety standards, airlines need a solution that streamlines the flight preparation process, simplifies and organizes workflows, improves flight safety and situational awareness, and provides a consistent look and feel across a worldwide coverage.

With Jeppesen charts you can customize your services and charts so you get the right information, in the right format, at the right time.

- Tailored charts provide your airline with specific information, such as company flight procedures, operational policies or pictorials of gate locations.
- Tailored services can be designed to fit your coverage areas, aircraft types and operation.
- Custom chart layouts are available with automatic revision service and can depict standard information changes if desired.
- Special issue charts are available so you can specify slight modifications to standard charts, such as adding company frequencies.
- Publication services offer full typesetting, graphics, production and distribution facilities to develop and maintain aircraft operating handbooks and airport analysis data.
- Comprehensive coverage areas that include all procedures and airport types.

Quality at every level.

- Jeppesen's unique set of business rules and quality processes ensure that data is verified at multiple phases during our production process.
- Jeppesen's quality processes are ISO 9000 and DO 200-A certified.
- The annual Jeppesen Quality Audit Conference allows customers to perform a first-hand, in-depth audit of our quality control organization and processes.

Created from source data and verified for accuracy.

- Data is collected from 200 countries in 24 different languages.
- Each year we transform 260,000 pages of raw source data from around the world into the standardized, Jeppesen chart format.

# Jeppesen Tailored and Standard Charts

Customized charts for your operations.

- We update chart data on a 14-day cycle to reduce the amount of change notices associated with Jeppesen services.
- Jeppesen performs several different types of calculations to verify data.
- When data needs clarification we work with our source providers to understand and verify the information before including it in a chart.

## Why you should use Jeppesen charts.

### Increased safety margins and efficiency.

- Tailored charts aggregate all of your company-specific information in one easy-to-read format.
- Lower the chances of executing procedures incorrectly.
- Briefing Strip format sequences information for easy access during critical phases of flight and reduces your workload.
- Readability and logical information flow reduces planning time and improves in-flight decision making.
- Lower environmental impact from paper delta sets and electronic distribution.
